

Preventive Maintenance

Keeps your equipment in top condition

- All makes, all models
- Komatsu trained and certified technicians service your equipment
- Equipment warranties are backed up by expert service and regularly scheduled oil analysis
- Higher trade-in value with documented maintenance

Modern Machinery offers a Preventive Maintenance program that puts the burden of servicing your equipment on us. Just tell us which machines you'd like us to cover, and we'll make sure they're properly serviced on time by a qualified technician. Services are completed by a factory trained technician and include OEM fluids and filters, oil sample analysis, mobile lube services, technical inspections to identify repair needs, and a comprehensive visual inspection to spot potential problems before they require more expensive repairs and cause lost production time.

You can complete jobs on time,
on budget, when your
equipment performance
is assured.

Consistent Oil Sampling predicts potential equipment problems

Oil Sampling Frequency

Check your OEM specifications handbook for recommended oil sampling intervals.

Records

Your results are stored on-line through Modern Machinery's Web site. Historical data is also available—graphs, reports and comprehensive recommendations.

Routine Preventive Maintenance Required

These benefits are achievable only if routine preventive maintenance (PM) is performed. See your OEM specifications book for proper PM steps.
